

MAKE SHELBY COUNTY, TN A HEALTHY PLACE TO LIVE

Lack of coordinated efforts in public health is a major barrier in Shelby County.

In Shelby County, **Blacks die more often than Whites** from heart disease, HIV/AIDS, cancer, and diabetes.

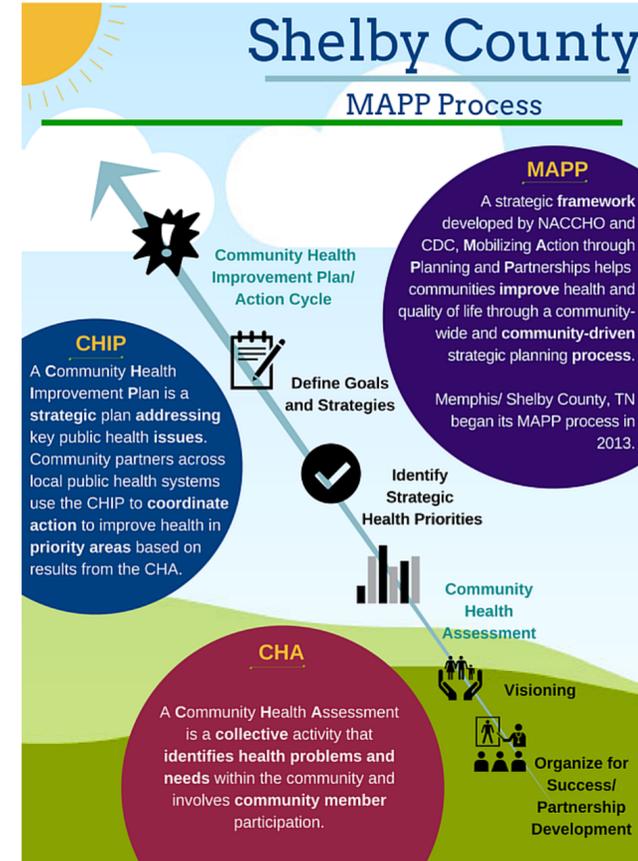

1 in 5 Shelby County residents feel they have inadequate **social support**. That's enough people to fill the **Fed Ex Forum**.

What can WE do about it?

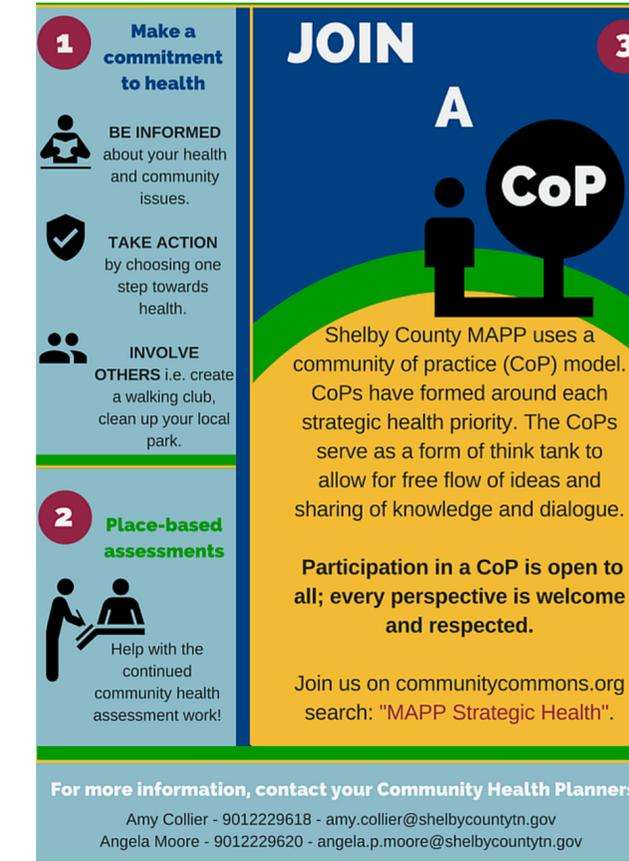

MOBILIZE

PLAN

ACT

The number of Shelby County residents with **diabetes** would fill a string of **MATA buses** along **Poplar Ave** from downtown Memphis to Collierville.

If we held a minute of silence for each **violent crime** in Shelby County from 2004 to 2010, we would not hear a single pin drop for **9 days**.

The MAPP Process. Health Assessments and Planning. Community-informed. Community-driven.

Facilitated by Shelby County Health Department
