

# The 1997 Agricultural Building & Equipment Plan List

## **INTRODUCTION**

### **The Agricultural Extension Service Plan File**

The Tennessee Agricultural Extension Service maintains a file of approximately 290 building and equipment plans, and makes these available to all residents of the state of Tennessee. These plans came from many sources. Some were developed by The University of Tennessee Extension Agricultural Engineering Department, but most were developed in a cooperative effort with the United States Department of Agriculture and the Cooperative Farm Building Plan Exchange. The Plan Exchange is no longer in existence, but the plans remain on file and are available.

The plans developed at The University of Tennessee are based on the research and demonstration experiences of scientists at The University of Tennessee. The USDA plans generally originated at land grant institutions across the country and were submitted to the Cooperative Farm Building Plan Exchange, where they were edited and distributed to all states for use in their Extension educational programs.

We have attempted to verify that each plan is appropriate for use in Tennessee. However, these plans are intended mainly for use as planning guides, and you should check with local authorities concerning building code and building permit requirements. Also, good construction practices should be followed when building from these or any other plans.

### **Using the plan list**

This list was prepared to assist you in obtaining plans from the Agricultural Extension Service. Although many of the plans are for agricultural structures, a wide variety of building and equipment plans is available. The plans are arranged by subject to help you locate the plan(s) in which you are most interested.

The plan number (PLAN NO.) for each plan is given in the first column. It is very important to use this number and double check it when requesting or referring to these plans.

The second column shows the number of sheets (NO. PAGES) in each plan so you can make sure any plans you receive are complete.

A brief description (PLAN DESCRIPTION) is given. Plans are difficult to describe with just a few words, but the description should help you further narrow your choices.

### **How to obtain plans**

All of these plans are available through the Agricultural Extension office in your county. Many county offices will have copies of the more popular plans on hand. However, not all counties stock all plans, so you may have to allow a week to 10 days to receive your plans.

Nearly all plans are available in "C" size (17 by 22 inches), and many are available in "A" size (8 by 11 inches). There is no charge for either size plan, but "A" size will be supplied when available unless "C" size is specifically requested. You can further help reduce our costs by requesting only those plans which you expect to be useful. Again, be sure to use the plan number when requesting your plans.
